

# ***Heart Stress Check***

Our hearts work hard every day, but in some instances they may be working harder than is necessary. This test can be used to determine if your heart is working too hard and can serve as an early warning for potential heart failure.

## **Heart Stress Check**

NT-proBNP elevated levels of this marker suggest that the heart is working harder than normal.

NT-proBNP can be used to determine risk level for heart failure and stroke.

**DO YOU  
NEED TO BE  
TESTED**

Heart Disease is the #1 killer worldwide and increases your risk for other diseases like Alzheimer's. Find out your risk with a simple blood test.
